

PROJECT TITLE: PATIENT MANAGEMENT SYSTEM

PROJECT OVERVIEW

Patients are normally the core customary people of any running hospital. These are people who receive or register to receive medical treatment. Many times almost in all hospitals around, the information about patient are normally neglected. A vivid example is the Kissy Community Hospital (KCH) in which over the years a lot of compliant about patient misinformation was coming. And this is so because the method of recording patient's information and data is manual and poor. It normally done on file base format and time wasting.

THE MAIN PURPOSE OF THE SYSTEM IS TO :

- ❖ computerize patient record
 - ❖ Errors reduction
 - ❖ Time Management
- ❖ Reduce the manual work of paper

PROJECT ROADMAP

FUNCTIONAL FEATURES

INSERT: This button is used to add a new patient detail in the database

UPDATE: this button is used to modify a patient detail in the database

SEARCH: this button is used to find details of a particular patient in the database

DELETE: this button is used to removed a patient detail from the database

DISPLAY: this button is used to show a detail of all patient in the database

EXIT: this button is used to close the system

USE CASE FROM THE SYSTEM REQUIREMENT

Actors	actor's goal to achieve	use case name
INSERT	Register a patient	Add (UC-1)
UPDATE	correcting patient detail	Modify(UC-2)
SEARCH	finding patient details	Find (UC-3)
DELETE	remove a patient detail	Remove(UC-4)
DISPLAY	show patient details	Show(UC-5)
EXIT	close the system	Close(UC-6)
